(54) Title: **TRANSCODER FOR A VARIABLE LENGTH CODED DATA STREAM**

(57) Abstract: The invention relates to a transcoder (100) for a variable length coded data stream such as an MPEG 2 coded data stream. The transcoder (100) comprises a receiver (101) which receives the variable length coded data stream. The receiver (101) is connected to a significance processor (107) that determines if a variable length coded coefficient is significant or less significant. The transcoder further comprises an encode processor (109) which generates a transcoded data stream from the original significant coefficients and the truncated less significant coefficients. All processing may be performed exclusively in the variable length code domain thereby providing a low complexity and high speed transcoder.
